PROFESSIONAL SUMMARY

- Obtained more than 2.7+ years of IT experience as a DevOps Cloud Engineer in the field of DevOps Automation/AWS Cloud/Linux.
- Worked on AWS to create, manage and configure the services like EC2, ASG, IAM, S3, EBS, Security Groups, VPC, CloudFront, EKS, ALB, Route53, Cloudtrail, Cloudwatch, Load balancer, Auto Scaling.
- Hands on experience in CI/CD pipeline using Jenkins tools.
- Worked on installing and configuring Jenkins master/slave on multiple servers.
- Responsible for CI/CD pipeline using Dockerizing applications.
- Practical experience in creating Dockerfiles and then building image and deploying it to various environments.
- Worked on ticketing tool like JIRA.
- Integrated Defectdojo with GitLab to show the vulnerability report to the development and testing teams.

TECHNICAL SKILLS:

Version Control System Tool:	Git, GitHub
Operating Systems:	Linux, Windows
Configuration Management:	Ansible
Automation Scripting:	Shell scripting, Groovy scripting
Build Tools:	Maven, MSBuild
Application Servers:	Nginx, Apache Tomcat
Continuous Integration & Deployment Tools:	Jenkins, Gitlab
Cloud Environments:	AWS, Azure(Beginner)
Container and Orchestration Tools:	Docker, Kubernetes
IAC Tool:	Terraform
CI/CD Tool:	GitLab, Jenkins, Github Actions
Bug Tracking Tool:	Jira
Application Security:	SonarQube, Trivy, OWASP, Checkmarx

Experience

Aug' 2022 - Present **DevOps Engineer** **Fineshift Softwares Pvt Ltd**

- Collaborated with global teams for 2.7 years, working with AWS, Azure, GitLab, and security technologies.
- Implemented automation using **shell scripting**, reducing time effort by **80%**.

PROJECTS & RESPONSIBILITIES

Designing and building web environments on AWS, which includes working with services like EC2, ELB, RDS, S3 and CloudFront for low latency URLs.

- Creating CloudTrail for monitoring user activity for compliance purpose, copying server logs onto S3 for backup, also maintaining S3 data lifecycle.
- Infrastructure monitoring with the help of CloudWatch and CloudWatch logs.
- Automated product delivery using continuous integration (CI) and continuous deployment (CD), Worked with AWS code build, Code Deploy, Aws pipeline etc
- Configured AWS Identity Access Management (IAM) Group and users for improved login authentication. Demonstrates initiative and good judgment in resolving issues.

Project domain : Banking

Cloud Infrastructure and CI/CD Automation with Terraform, Jenkins, and AWS:

- Provisioned AWS infrastructure using Terraform for EC2, VPC, S3, ELB, and Auto Scaling.
- Configured remote backend using S3 and DynamoDB for state management and locking.
- Automated infrastructure management with Terraform modules for consistent and reusable deployments.
- Integrated Terraform with Jenkins to automate infrastructure provisioning in CI/CD pipelines.
- Developed Jenkins pipelines for build, test, and deployment using Maven and Docker.
- Deployed containerized applications with Docker and managed multi-container setups using Docker Compose.
- Implemented secure access control with IAM roles, policies, and S3 bucket policies.
- Integrated CloudWatch and Prometheus for monitoring infrastructure health and performance.

Project domain : Banking

.NET application deployment using GitLab:

- Led DevOps implementation for the GMO trading and investment application.
- Designed and enhanced GitLab CI/CD pipelines, introducing parallelization to accelerate build times and utilizing dynamic environment provisioning for improved efficiency.
- Embedded security protocols within CI/CD pipelines by incorporating static analysis and vulnerability scans during the build process to ensure robust application security.
- Worked closely with a team of four developers, overseeing repositories and integrating with Jira to streamline project management and collaboration.
- Utilized GitLab features to enable efficient rollbacks, providing a reliable safety mechanism for production deployments.
- Implemented disaster recovery in GitLab by downgrading the main server and transforming the DR server into the new main server. Performed installation of GitLab and GitLab runners, and wrote development scripts to check the health status of the DR setup, monitoring any alterations.
- Worked with development, testing, and operations teams to streamline workflows, fostering a culture of collaboration and continuous improvement. Engaged with stakeholders to gather requirements and provide insights on optimizing DevOps processes.

Project domain : HealthCare

Java application deployment using Jenkins:

- Set Up Jenkins Environment
- Configure Source Code Management to link your GitHub repository containing the Java application code.
- Used Maven/Gradle to compile and package the Java application.
- Set up test execution steps to run unit tests and other necessary tests
- Deployed the application on the deployment servers.
- Implemented notifications or post-build actions to inform the team upon successful deployment.

EDUCATION

- B.E from Mahatma Gandhi Missions College Of Engineering, Nanded
- HSC from Yashwant College, Nanded

CERTIFICATION

- GitLab Technical Engineer
